DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-11 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. In particular in claims 1 and 6, the limitation that the connector "could have better electrical performance" is relative to something unknown and is indefinite. The limitation is given little weight.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in —
- (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or
- (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a);

Claims 1, 2, 5, 6, and 7 are rejected under 35 U.S.C. 102(b) as being anticipated by Morlion et al. ("Morlion").

Application/Control Number: 10/815,688

Art Unit: 2833

Per claims 1, 5-7, Morlion discloses a grounding structure of an electrical connector, which comprises: a housing 3, predetermined transmitting terminals 4 and grounding terminals inserted inside said housing (col. 3, lines 10-15), a cable (col. 3, lines 1-15), comprising predetermined transmitting units and grounding line; and a connecting part 9, engaging said grounding terminals with said grounding line to form electrical contact,

thereby, said connecting part engaged said grounding terminals with said grounding line of said cable securely.

Per claim 2, said connecting part is a sheath with electrical contact material.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 3, 4, 8, 9, 10, and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morlion as in claims 1 and 6 in view of Chiou. Morlion does not show a protrusion. Chiou discloses stamped protrusions or ribs 431 on connecting part 43. At the time of the invention, it would have been obvious to include protrusions on the Morlion connecting part as taught in Chiou. The suggestion or motivation for doing so would have been to increase the retention force between the connector and the cable as taught in Chiou, col. 3, lines 1-5.

Conclusion

Application/Control Number: 10/815,688

Art Unit: 2833
